## AIR COOLED CHILLERS FOR OUTDOOR INSTALLATION

EQUIPPED WITH INVERTER SCREW COMPRESSORS, AXIAL FANS AND MICROCHANNEL CONDENSING COILS

Cooling capacity from 306 kW to 1555 kW

## VERSIONS

**RAH MC VS** - standard version

**RAH MC VS S** - silenced version

**RAH MC VS HE** - high efficiency version

**RAH MC VS HE S** - high efficiency silenced version

The air-cooled chillers of this serie are suitable for outdoor installation and are particularly suitable for cooling liquid solutions, used for industrial applications or air conditioning systems, in which it is necessary to ensure excellent performance and low environmental impact. The machines are designed as outdoor units in compliance with European standards EN378 and its updates and are able to meet the seasonal efficiency requirements established by Regulation (EU) 2016/2281-LOT21.

The units of this series are equipped with two screw compressors, each with a continuous control of the cooling capacity, realized thanks to an in-built inverter. Each compressor operates on a single totally independent circuit, thus ensuring the maximum reliability.

All the units are totally factory assembled and tested, following specific quality procedures. Besides, they are totally hydraulic, cooling and electrical connected, permitting a quick installation once on site. Before the test, the cooling circuits of each unit are subject to a pressure tightness test and then charged with Refrigerant and

non-freezing oil. Therefore, once on site, the units must be only positioned and electrically and hydraulically connected.

The reduction of the sound level in the silenced version is reached thanks to refrigerant/air exchangers with wider surfaces and a compressor cabinet insulated with higher thickness soundproof material.

Units CE certified in compliance with the European regulation 2016/2281 ERP 2021.

# MAIN COMPONENTS

## STRUCTURE

Structure made of a base and a chassis manufactured in high-thickness galvanised steel, assembled with stainless steel rivets. All galvanised steel surfaces are powder-coated with colour RAL 7035. The technical section contains compressors and the other cooling circuit elements.

## COMPRESSORS semi-hermetic screw type with INVERTER

Compressors of semi-hermetic screw type, controlled by integrated frequency inverter, allowing to adapt the power to the load variations ensuring at the same time the maximum efficiency at different operating conditions. The compressors are provided with motor thermal protection, rotation direction control, crank-case heater, oil filter, oil service valve, POE oil charge and vibration dumpers kit. Compressors lubrication is of forced type without pump, to avoid excessive oil migrations to the cooling circuit, compressors are equipped with an oil separator on discharge side. Both compressors are equipped with an oil flow safety switch, an optoelectronic device operating in case the oil flow inside the compressor falls below the minimum threshold.

## EXTERNAL CONDENSING COIL

Totally made up of aluminum alloy to grant a perfect and continuous contact among tubes and fins optimizing the thermal exchange and reducing dimensions.

The high passivation degree of the used alloy, besides the peculiar assembling way, avoids the possibility to have galvanic corrosion phenomena. On demand it is also possible to provide the units installed in particularly aggressive environments with surface treatments against exchangers environmental corrosion. The cross "V" arrangement of the condensing coils makes the units of this series perfectly each other modular, granting at the same time the easiest access to the technical room both for checking operations required during the normal unit functioning and for maintenance.

## STAINLESS STEEL PLATE EVAPORATOR (size 352+552)

Of "single" or "dual" circuit type, with high thickness close cell insulation and UV ray-proof. The max operating pressure limits are 6 bar for water side and 45 bar for refrigerant side. The evaporator is also equipped with safety water flow switch switching off the unit in case of low water flow through the evaporator.

## SHELL AND TUBE EVAPORATOR (sizes 652+1502)

Tube bundle type with dry expansion and pure electrolytic copper tubes, shell and tube plate made up of carbon steel. The exchanger is provided with anti-condensation insulation made up of a nitrile rubber and polyethylene foam with a thickness of 8mm externally protected by an embossed scratchproof poly-

ethylene film. The hydraulic connection are of elastic Victaulic type. Inside the shell, some plastic and corrosion-proof baffles, allowing a correct water distribution and making the tube bundle particularly strong and vibration free, even with high water flows. The evaporator is also provided with a safety water flow switch that does not allow the unit to operate in case of water flow rate lack to the evaporator.

## AXIAL FANS

With external rotor directly coupled to a three-phase electronically commutated motor (EC) they have the possibility of a continuous regulation of the speed by means of a 0-10V signal completely managed by the microprocessor. Aluminum blades with wings profile are suitably designed to avoid any turbulence in the air detachment zone, granting in this way the max efficiency with the minimum noise level. The fan is equipped with galvanized steel protection grid painted after the construction. These fans, thanks to a more accurate regulation of the airflow, allow the unit to operate with an external air temperature up to -20 °C.

## COOLING CIRCUIT

Cooling circuit made up of electronic thermostatic expansion valve, sight glass, high pressure safety device, anti-freeze protection on evaporator, high and low pressure switches, dehydrating filter with replaceable cartridges, shut-off valve on liquid line.

Each compressor operates on an independent circuit granting in this way, a considerable reliability.

## ELECTRICAL BOARD

In compliance with CE Norms, contained in a suitable section protected by internal safety panel, provided with a lock-door main switch. Inside all the control and protection components are suitably placed, together with terminal board and auxiliaries. The electrical board also includes the control device for power supply phases to prevent the compressor wrong side rotation. Microprocessor and relevant display are also placed inside the electrical cabinet.

## MICROPROCESSOR

For unit management installed inside the electrical cabinet, with double evaporator in/out control of the chilled water temperature, as well as control of working parameters and equalization of compressors working hours, failures auto-detection system, alarm log, start and set point timeslot programming, possibility of remote management and supervision by enabling standard communication protocols management, complete with compressors hour counter.
