

# RWH VS Ke/Kh

**WATER COOLED CHILLERS WATER CONDENSED FOR INDOOR INSTALLATION**  
EQUIPPED WITH SCREW COMPRESSORS FULL INVERTER  
AND SHELL AND TUBE EXCHANGER

Cooling capacity from 269 kW to 2020 kW

## VERSIONS

**RWH VS** - standard version

The modular water cooled chillers of RWH...VS KE series are suitable for external installations and are particularly indicated to cool fluid solutions for industrial applications or air conditioning systems of commercial sector, where it is necessary to grant a very low environmental impact, class A efficiency and the compliance with the seasonal efficiency requirements specified on the EU Regulation 2016/2281.

The units of this series are equipped with two semi-hermetic screw compressors; each one provided with constant control of the cooling capacity through dedicated external inverter, each compressor operates on a single independent circuit thus ensuring the highest reliability.

All the units are totally factory assembled and tested, following specific quality procedures. Besides, they are hydraulic, cooling and electrical connected allowing a quick installation once on site. Before the test, the cool-

ing circuits of each unit are subjected to a pressure test and then charged with refrigerant and non-freezing oil. Therefore, once on site, the units must only be positioned and electrically and hydraulically connected.

# COMPONENTS

## FRAME

Robust and compact supporting structure, built with folded and painted steel profiles that integrates the exchangers of the evaporator and tube bundle condenser unit and on which all components are mounted. On demand, the compressors can be acoustically insulated with a cabinet covered with a standard sound-proofed material or with a double thickness sound-proofing material to further reduce the unit sound level.

## COMPRESSORS semi-hermetic screw type with INVERTER

Compressors of semi-hermetic screw type, controlled by integrated frequency inverter, allowing to adapt the power to the load variations ensuring at the same time the maximum efficiency at different operating conditions. The compressors are provided with motor thermal protection, rotation direction control, crankcase heater, oil filter, oil service valve, POE oil charge and vibration dumpers kit. Compressors lubrication is of forced type without pump, to avoid excessive oil migrations to the cooling circuit, compressors are equipped with an oil separator on discharge side. Both compressors are equipped with an oil flow safety switch, an optoelectronic device operating in case the oil flow inside the compressor falls below the minimum threshold.

## EVAPORATOR

Tube bundle type with dry expansion and pure electrolytic copper tubes, shell and tube plate made up of carbon steel. The exchanger is provided with anti-condensation insulation made up of a nitrile rubber and polyethylene foam with a thickness of 8mm externally protected by an embossed scratchproof polyethylene film. The hydraulic connection are of elastic Victaulic type. Inside the shell, some plastic and corrosion-proof baffles, allowing a correct water distribution and making the tube bundle particularly strong and vibration free, even with high water flows. The evaporator is also provided with a safety water flow switch that does not allow the unit to operate in case of water flow rate lack to the evaporator.

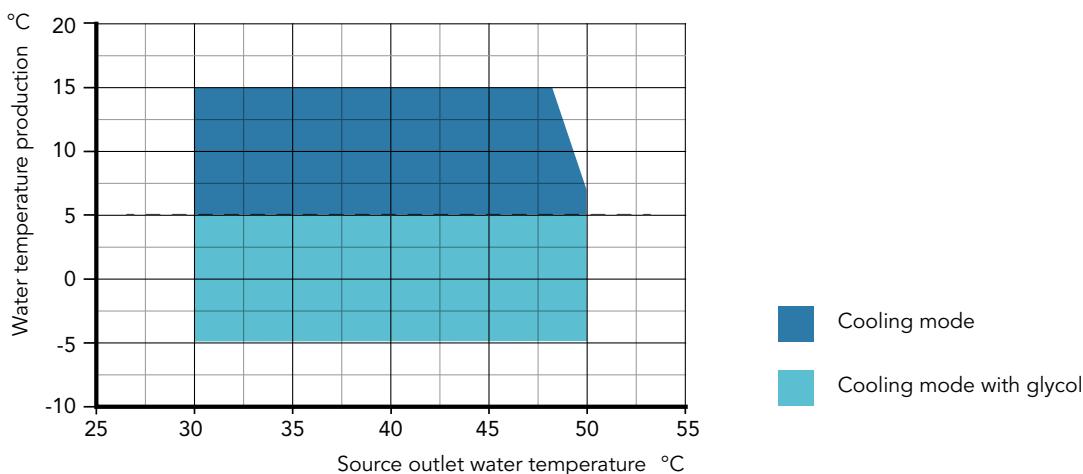

## CONDENSER

The condenser, complete with victaulic couplings, of singlepass type with water flow on the tube side (finned externally and internally lined) and refrigerant flow on the shell side.

## COOLING CIRCUITS

Each cooling circuit is equipped with the following elements: filter drier, sight glass, electronic thermostatic valve, high and low pressure safety valves, shut-off valve on liquid line, non-return valve on compressor discharge, high and low pressure gauges, high and low pressure switches, temperature probes to evapo-

## OPERATING RANGE

rator inlet and outlet.

The above-mentioned components are connected in a close circuit through copper pipes and connections. The permanent junctions among components are made by brazing or welding, following processes and made by qualified staff.

## ELECTRIC BOARD

The electrical cabinet of the unit, is realized in compliance with current European Standards inside a metal compartment.

The main features are: three-phase power supply 400V/3ph/50Hz on all models (if not differently required); low voltage auxiliary circuit 24Vac with insulation transformer; lockable mechanical main switch; protection automatic switches; terminal box for signal and management free-comtacts.

The opening panel of the a.m electrical cabinet is equipped with main switch. Inside the compartment the following main components are also installed: contactors; automatic overload protection switches; transformers; numbered wires; low voltage auxiliary circuit; terminals; management and control electronic cards.

## MICROPROCESSOR

All the units are subject to a safety cycle with continuity tests on the protection circuit, insulation resistance and tension test (dielectric strength). The unit management is realized by the management program uploaded in the electronic microprocessor. The microprocessor is made up of: an electronic control board with terminals for working parameters transmission and control devices activation, a user interface board with programming buttons and graphic display to show operation status and alarms. The electronic control board manages all the devices installed in the unit based on the values of the operation variables, with the following main functions: unit ON/OFF from board or from remote position, management and storage of alert and alarm status. The user interface display of the microprocessor allows also to see the following information: working parameters set values, functional variables values; analogue and digital inputs and outputs status, unit operation status, alert and alarm indications. Possibility to interface EMS/BMS management systems.

<b>General electrical data</b>										
Maximum input power	[kW]	354,8	403,2	449	531	579,4	604,8	673,5	796,5	
Maximum input current	[A]	644	746	840	1140	1192	1119	1260	1710	
Inrush current	[A]	*	*	*	*	*	*	*	*	

(1) Ambient air temperature 35°C

(2) Fluid: Water - In/out Temperature: 12/7°C

(3) Sound power level in accordance with ISO 3744.

(4) Sound pressure level at 10m from the unit in free field conditions, in accordance with ISO 3744
